facebook login button

Posted by goodreality - 17 Jan 2012 15:04

Hi

I must have missed something somewhere....

The facebook button never shows up by my sites...

All the rest function well.

Anybody could help?

Thank you

Eagle

If you have "activate facebook connet" set on the configuration panel under Joomla settings, the login button should appear automatically when someone tries to use a function that requires logging in.

He's right, since 1.1.4, facebook button doesn't appear when it's called from "add media" using lightbox.

Try to activate "my channel" button, then tell us if the button appears here ? It should.

I have this problem too.

btw, facebook auth doesn't work for new users as i explain it here :

www.fidsoft.com/index.php?option=com_kun...catid=10&id=1725

Hope you will find a solution. I had to disable facebook connect :/

Good luck

Indeed Fideri

Just as Gzukry say, it does not work. (I surely did activate fb connect:).

The fb connect works fine when somebody wants to post a fb comment or click the "like" botton. It does not work on the Joomla log in page. (for log in with facebook account).

Note that you don't need to be log on YOUR website to use Like or comment. You just need an active facebook connection cookie.

It use to work perfectly with videoflow 1.1.3. Maybe you can try to downgrade to use facebook login ?

Or wait for Fideri to save us

Thank you Gzukry.

I will wait for Fideri to solve this problem.(because with 1.1.3, I had some other issues).

I like 1.1.4h and have no other issue till now, except from the fb log in.
