Need help.

Posted by Gzukry - 27 Jan 2012 12:43

Hi !!! Need your help again

When i press +MyList, it works, but that display an error :

Warning: mt_rand() [function.mt-rand]: max(-727379969) is smaller than min(1215752193) in /homez.344/hiphopfe/www/components/com_videoflow/helpers/videoflow_list_manager.php on line 23

How can i solve it plz?

Another thing, i'm trying to have my fav displayed in the other order > Date DESC.

I found function but it's doesn't work when i switch ASC to DESC

componentscom_videoflowmodelsvideoflow.php

```
  function getFavourites ($userid, $mid=null)
  {
    global $vparams;
    $lo = JRequest::getCmd('layout');
    $db = & JFactory::getDBO();
    $fbuser = JRequest::getInt ('fbuser', null);
    $c = JRequest::getCmd ('c');
    $task = JRequest::getCmd('task');
    $query = 'SELECT DISTINCT mid FROM #__vflow_mymedia WHERE mid !='. (int) $mid.' AND (jid='.
(int) $userid;
    if ($fbuser) $query .= ' OR faceid='. (int) $fbuser;
    $query .= ') ORDER BY date [u]DESC[/u]';
```

```
    $db->setQuery($query);
    $ids = $db->loadResultArray();
    if (!$ids) {
    return false;
    } else {
    $fcount = count($ids);
    JRequest::setVar('fcount', $fcount);
    $limit = $vparams-> sidebarlimit;
    $limitstart = 0;
    if ($task == 'userfavs' || $c == 'fb' || $lo == 'playerview' || $lo == 'ajaxlist' || $lo == 'simple'){
          $this->_total = $fcount;
          $xparams = $this->getXparams();
          $limit = (int) $xparams->get('limit', $vparams->limit);
          $limitstart = $this->getState ('limitstart');
    }
    if ($mid) {
    $f_count = $fcount + 1;
    } else {
    $f_count = $fcount;
    }
    JRequest::setVar('f_count', $f_count);
    $query = 'SELECT'.$this->_getSubquery().
           ' WHERE published = &quot;1&quot; AND media.id =' . implode( ' OR media.id = ', $ids );
    $db->setQuery($query, $limitstart, $limit);
    return $db->loadObjectList();
    }
  }
```

> You can see result here >

www.hiphopfever.fr/index.php?task=userfa...ever&layout=grid

$query for getbyuser is a bit different.

```
    $query = 'SELECT SQL_CALC_FOUND_ROWS'.$this->_getSubquery().
          ' WHERE (published = 1 AND media.userid='.(int) $userid . $fil .')' .
          ' AND media.id !=' . (int) $mid .' ORDER BY media.dateadded DESC';
```

Is there a mistake ?

_____

The first issue is a php bug (I think it affects PHP5.3 which, unfortunately, we can't do anything about.) You can try replacing the function "mt_rand" with the slower "rand" in the named file.

Concerning the second issue, the two functions are different because the structure of the database tables is different. The DESC, ASC modifiers will not work. You could try changing return
$db->loadObjectList()
to
return array_reverse($db->loadObjectList())

Note that I have not tested this, so not 100 percent sure it will work.

_____

For random function, it works with php 5.3.8.

I switch mt_rand to rand in a few files :

view.html.php

videoflow_user_manager

videoflow_list_manager

and in local server output.

Thx again.
