disable lightbox also in registration.

Posted by goodreality - 05 Feb 2012 10:10

Hi Fideri

When somebody is clicking on "My Channel", he/she are referred to a new page, for login/registration. That is good!

But;

When clicking on "MyList", or"add Media", the login/registration is coming in a light box, even if I disabled light box in VideoFlow.

How can I correct, to avoid this light box.

Thank you!!

By design, it is not possible to turn off lightbox for certain functions. The logic is that people shouldn't have to leave the current page to perform tasks that are not related to content viewing, such as logging in or adding items to playlist. e.g if someone is watching a video and they click the +MyList button, that operation should be completed without interrupting the video.

Is there any reason why you don't want them to appear in lightbox?

Understood.

The reason for my wish, is because of the facebook connect button issue;

I am using now another facebook connect module (see www.theawakenedcampaign.com), and I can't figure out how to position it to the login page instead of yours.

Could you tell me how to do that?

Thank you!

_____

I see your point. Does the third party module work well with VideoFlow (I am considering removing Facebook authentication altogether and relying on third-party modules for those who want it).

Back to you question, the only way to replace Videoflow's facebook login button with a third-party one is by editing the login template(s) and changing the code (Joomla allows you to load a module in content area).

_____

editing the login template to load a module, is a good idea.

I will do that. Thank you!

Is still did not test everything with the third party fb connect, but so far, it looks as if it is producing no problem at all.

I will tell you if I run into a problem.

The one I am using is fbjconnect. It is free, and very well done.

One question still;

Where is the Login Form of VideoFlow, so that I can edit it?

_____

I will test fbconnect and see if we can adopt it for VideoFlow. The template file to edit is views/videoflow/tmpl/templatename_login.php.

Substitute templatename with the template you are using.
