TABS : Related and Tab one

Posted by Gzukry - 18 Feb 2012 13:40

Hi,

Do you know why i have a error here :

www.hiphopfever.tv/index.php?task=play&id=2232

And not here :

www.hiphopfever.tv/index.php?task=play&id=1314

Tab "Related" give this error. (Tab2 is ok)

Notice: Undefined property: VideoflowViewVideoflow::$tabone in /homez.344/hiphopfe/www/components/com_videoflow/views/videoflow/tmpl/grid_play_tabs.php on line 101

I checked in database in ***_vflow_data and didn't see anything special.

I switch to listview, then simpleview, same error.

I add "option=com_videoflow&Itemid=2&" and still have the error.

Could it be source files or i did something wrong ?

I can't reproduce the issue. Try changing line 101 from if (is_array($this->tabone)){ to if (isset($this->tabone) && is_array($this->tabone)){

_____

Yes !!

It's better. Instead of the error text, that displays correctly tabone , but nothing inside.

Do you know why ? I host some video from this artist.

Where can i find info about your "related" function plz ?

THANKS A LOT FIDERI FOR AAAAALL YOUR HELP !

_____

That's because no related video is found using our search algorithm. If tags are defined, we search by tags. Otherwise, we search by title. There are other filters we apply, but I can't list them all here. Try the search function to see if it returns any results.

_____

I FOUND THE SOURCE OF THE PROBLEM !!

That error come from

'

in tags.

I checked database and change

90's to 90s

> No more error and tab1 (related media) correctly display related media

It seems that doesn't support some characters.

So, what can I do (I don't realy want to remove all ' manualy 🙂)?

Ok, i found a way.

In com_videoflowmodelsvideoflow.php

```
function getRelated ($media, $xlimit = null)
   {
    global $vparams;
    $vtask = JRequest::getCmd('task');
    $related = $catfilter = null;
    if ($vtask == 'cats' ) {
    $cat = JRequest::getInt('cat');
    $catfilter = ' AND media.cat = ".$cat."';
    }
    if (empty($media->tags)) $mtags = $media->title; else $mtags = $media->tags;
```

```
    $db =& JFactory::getDBO();
 $mtags = str_replace(array(&quot;'&quot;), &quot; &quot;,  $mtags);
 $media->tags = str_replace(&quot;'&quot;, &quot;&quot;, $media->tags);
```

So I added this :

```
    $cat = JRequest::getInt('cat');
    $catfilter = ' AND media.cat = ''.$cat.'';
```
